A: I finally found an answer, it's not really related to the topic but i couldn't find anything to say about it. If i extract the the d3d9.dll from gta sa/game/data/assets to gta sa/data, all the roms start up fine. i tried copying the d3d9.dll to the gta sa/data, and then it just had the annoying "d3d error" message Posted! I'm just starting to learn how to program so any help with this would be great! I'm looking at a code from a book and I don't understand how this is even possible... I'm sorry if the title doesn't make sense. Here's what I don't understand: 

```
public class box { public box() { String boxName = " box "; } public String getBoxName() { return boxName; } public class testbox { public static void main(String[] args) { // Instantiate the box. box box = 82157476af
```
